Show More Show Less How it works Login Contact Us Ask Your Question Send It. Send a Houzz Gift Card. It fills then drains immediately on all cycles. I have only used HE detergent, in lesser amounts than recommended in manual and on machine. Called Bosch and representative said only to use 1 to 2 tablespoons. Well, they should have put that in the manual then. Also, wire spring around gasket has been coming off since the first month. Please help! No error codes appear, it just fills, drains, then shuts itself off. You can run a self diagnostics on this machine and it will provide a lot of info. I really cant post the tech info here but I can email it to you if you provide an email address. It is a complete teardown and diagnostic manual for a couple of other models, but they also apply to the 500 and 800 series as well. My guesse would be the motor control board has gone out, you can confirm this is self diagnostic mode. Hope this helps and if you can provide an email address I can email you the manual in pdf format. They are barely off the page. I have found on the web that for earlier models there is a reset code for Bosch washers.

It requires one to get into the programing section of the controls. I have read the Bosch manuals which you have so generously posted and do not see anything for this washer. My washer reads out an error code of E01 and then in the programing section also reads out code C00. Your manual indicates that there is a child interlock function on page 25 or 26. This process has not returned the door lock to normal operation. The manuals you have referenced do not seem to give pages 25 and 26. Do you have any thoughts on this problem It makes small hole in all of our tshirts. We ran a stocking around the drum and found rough spots which we removed with a diamond bit. Still have the problem. Anyone else with the same experience. 5 he Bosch tech says get a new drum but I dont want a repeat. BTW my 3 yr old Bosch dishwasher is on its 2nd recall. Never gonna buy Bosch again. Fortunately my mold was mainly on the bottom where the drain holes are and not around the whole seal. I also recently discovered that liquid detergent contains animal fat and have switched back to an HE compatible powder Tide. I cannot believe how much cleaner my clothes are, how sheets no longer get a slightly rancid smell when theyve been sitting in the cupboard for awhile, and how much cleaner my washer looks and smells. I will never go back to liquid detergent. Please email service manual so I can run diagnostic test. Is it possible to post a link to their manuals. Will send on the manual. I would greatly appreciate it. Display is reading E. No number code afterward. Signal keeps beeping and door is locked and cannot unlock it. Back when I had mine, it locked and I couldnt get it unlocked. Dont remember if a error code displayed or not. Any way, the repairman told me to unplug it for awhile and that took care of it. Repair man replaced door lock and now I get nothing. Repairman cant come back for four days. I have gotten an E04 error twice In the last few months, so believe I should clean out the pump.

[www.americanapi.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626c45dccbb79---cambridge-740-manual.pdf](http://www.americanapi.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626c45dccbb79---cambridge-740-manual.pdf)

Cant believe so many have problems with these machines. I wish they still made them. Came with my house 2005 MODEL I think. For the past year I get an E04, so I turn to off, wait, then to drain, allow water to drain out and back in business. Today it just STOPPED!!! Will work in Xtra Sanitary and Quick wash but will not spin or drain and door is locked. Holding my clothes hostage. Wondering if I need a new washer or if it can be repaired, correctly this time It is brushless. everything checks out OK there I opened the drain cover, cleaned up not much in there. Still keep getting the code any ideas Do I need to replace the pump. The clothes are still soaking wet when the

code comes up and the washer stops doing anything If the pump is fine, the problem could be excessive suds. If that is not the issue, the pump may have failed. Do you hear it running when the machine is supposed to be draining Why should someone email you the links do you honestly expect other people to put in more effort to solve your problem than you seem willing to put forth Prior to trying these, it started to drain and the cloths were drier. Tried bother suggestions anyways. Thanks for your response You will note, if you read what I posted, that I used names at the start of each paragraph. I questioned Mr. Meyers effort. You, I offered advice a service I am now regretting. Are you that tightly wound, or loosely wound depending on your perspective. If you are asking for help, requesting that others give of their time and effort to assist you, put forth a modicum of effort yourself and actually read the reponses. Tightly wound YOU are the one asking for something and then being snarky. It was your misunderstanding, not mine. Perhaps you could be grateful for help rather than being a jerk when you are at fault. Ive been sending people the manual when they ask for it for a few years now, and it doesnt bother me at all. I actually hadnt noticed the link had been posted.

All the best Does anyone know what this code is and how to fix. It wont agitate or spin. Maybe a service manual I could download.Only one screw catches and screws tight. Does anyone have an idea to fix this. It seems whatever metal piece that the one screw tightens into is not in the other screw locations. You can access them here Any ideas I would be extremely grateful to have a copy of the Bosch self diagnostic book.They all start normal, but we leave then come back 45 mins later and it is frozen at 45 or 56, and it is random where it stops at. But never completes the wash cycle. But sometimes it freezes a second time or more. I think the washer dates to probably 2005 or 2006, so Im pretty sure this is an early Nexxt model.

I have started a couple of other posts asking about Energy Star top loaders HE and nonHE, ready to get rid of this Bosch front loader. I always run an extra rinse because when i dont it still feels like there is some soap residue, despite the fact that I only use HE detergent and follow the recommended amounts, sometimes using even less. Can you all help me choose more appropriate cycles. I havent found the owners manual very helpful. I lightly layer the clothing, interspersing jeans with teeshirts with dress shirts. I never wash just a load of jeans or just a load of shirt. I do wash only a load of queen size sheet set. I rarely load the drum more than half way, and again, lightly put in, not packed in. I have had to replace shirts at about the one year mark, whereas with my old top loader, the shirts lasted a few years. I do turn them inside out. Any suggestions on these two. I am wondering if the Permanent press cycle would be better I am unable to iron these out. Is there a better cycle to run sheets on so they dont get creases like this, and tangled so horribly Both fit into the washer okay with space at the top. The two times Ive tried to wash these, the interior of the quilt or pad didnt get wet at all. Ive been taking these to the laundromat, what a pain. Someone in another post recommended that I try a soak cycle first, then proceed with one or two wash cycles. The owners manual recommends delicate cycle which I admit I havent tried.My husband and I have

allergies he to dust mites and I havent successfully washed pillows in the washer. They must run on a hot cycle to kill the dust mites. I like that the temps can go high on this machine, the sanitary cycle. This is one of my concerns about getting an Energy Star or HE top loader right now, only a couple of models have an internal heater, and Im not ready to commit over a thousand bucks right now.

This is particularly important with frontloaders and HE toploaders which tend to be less forgiving when using inappropriate cycles. Ive washed pillows, comforters, quilts and such numerous times in my Calypso HE toploader, but it has a specific Bulky Items cycle. Doesnt the heat and arid environment of machinedrying kill dust mites just as well. Some newer dryers have an allergy cycle which runs at high heat for a longer time. A similar effect could perhaps be gotten by running an autodry cycle on the Extra Dry or Very Dry selection.Ive always wondered about hot temps in dryer for killing dust mites, but havent been able to find much information about it. It was in the same drawer with the owners manual below the washer, although I had never seen this before, it was hidden amongst the warranty info. Top Loaders Which is better. Q Comments 462 I would choose a top loader any day. Ive had both, and I can tell you, theres nothing like good old traditional design. In my personal experience, the front loaders are not worth the money they cost, they are much heavier and harder to move and they have to be cleaned often. A big problem with front loading washers is mold and mildew buildup, due to lack of proper ventilation. Meaning, there isnt enough airflow to allow them to fully dry, and this is because of their design. What will happen is it will cause your clothes to smell like mildew. I was able to control this using white distilled vinegar, and cleaning it constantly. A top loading washer is just so much simpler. I definitely prefer the stainless steel tub. I like the ones without the agitator because it allows for more room and makes it easier to wash larger items such as comforters. Ultimately, it is a personal preference. I just know that my first experience with a front loading washer wasnt all that spectacular. Hope this has helped..See More I really need help. I am so stuck!!!! Q Comments 82 Sounds like your son really knows what he likes.

Ordinarily Id say to choose some curtains with a little more oomph and then use those colors to coordinate your comforter and other pieces, but I think youd have to be sure you can coordinate with a bed covering he likes. You do need some warmth in there wood, leather, or curtains, pillows and other accents. Masculine doesnt have to be cold..See More Mid Century Galley Kitchen Retrofit or Replace. Q Comments 47 Speaking just in terms of light and not environmental factors, I think they both have their place. With lower ceilings or retro styling, I think fluorescent often preferable. I love LED, which can also be similarly warm BTW, but think they can drive some people insane I once had a realtor flip an LED switch on and off several times. I switched it back on as she yelled, Its broken, I said for 15ish seconds, followed by an uncomfortable silence as she realized the lights had come up to full so they may not be for everyone. You get a warmer, more diffused light w fluorescent, but shorter lifespan in areas where they are switched often, rather than left on, so there is sometimes a trade off to take into account. And that kind of ambiance to me may mean nothing to others in which case, LED for general lighting!.See More Mold issue with front loading clothes washer would you buy one again Q Comments 80 After doing a lot of research, my first choice would have been a Speed Queen washer and dryer set, however we didnt have any local dealers, and besides that the cost put it over my budget. My second choice was a front load LG set that was on sale, which I have now had for over a year. I am very happy with it; no complaints, and most importantly, clothes come out clean. I do wipe around the rubber seal and dry the soap dispenser when I am finished with the laundry. There is a small access door at the bottom of the washer which is where a small drain hose and lint filter are located.

I periodically clean the lint filter and drain any standing water in the small hose. Its easy to do and takes very little time. The washer door is designed that it can be left open slightly ajar so that the

interior can dry. I also do not use liquid fabric softeners. After a year of regular use I have had no issues with mold or mustiness. My LG washer still looks like new and functions well. I am hopeful that with proper maintenance it will provide me with many years of good service..See More czechchick2 10 years ago last modified 5 years ago I have LG and wash king size comforters in. Bulky cycle has automatic low speed. Reg cycle is fine as long as the spin speed is set on low or medium mine speed is adjustable. After I use quick wash warm waterfor extra rinse to make sure it is done.If needed, evenmore extra rinse. The first time I washed it in the LG using reg.My euro washer has this wrinkling dilema but I have no choice. It only has low or hight speed. Before I put the comforter in, I fold it lenth wise in half and half again the depth of the drumand just roll it as you would pack a sleeping bag. It washes better than just stuffing it in. I also should have said that I almost never wash in cold water. Regular clothes are washed in warm water, and sheets, towels, and underwear are washed in hot water. Again, I havent had any problems with fading, so I think fading has more to do with detergent than wash temperatures. Whites are often washed in Temp Boost setting, which is 150 degrees at 66 minutes. Longer washes can be done by using the Heavy Duty button, which I do if I have things that need whitening. You know, my Miele does some tangling too and I think thats just the way frontloaders are. I just separate as I remove from the washer it has not injured my clothing.

The warm wash on your Bosch might be considerably warmer than the warm wash on your previous toploader, and although you are using the recommended amount of detergent or less, the Bosch is probably using so little water that the detergent water is really more concentrated than with a toploader. I would try cutting back on detergent as well as switching to a detergent without optical brighteners. I have had to replace shirts at about the one year mark, whereas with my old top loader, the shirts lasted a few years. I am wondering if the Permanent press cycle would be better.I am unable to iron these out. Is there a better cycle to run sheets on so they dont get creases like this, and tangled so horribly. As far as I can figure, more wrinkles are a way of life with frontloaders. Thats how it seems to me. You could try a lower spin speed the trade off is it wont be as clean of a rinse. I would also try drying on a gentler heat over a longer period of time, and removing while still slightly damp and iron it while damp. Wrap in a garbage bag and freeze for 2448 hours. Soaked all the way through, no dry spots like my attempt on the normal cotton cycle. Seems to reduce the tangling, even in a cycle that was almost all jeans which in the past have been the worst offenders of tangling!. I mostly use Seventh Generation products which dont have OBs, but occasionally have had to buy a bottle of Tide HE Free and Clear if I cant find the unscented Seventh Generation. Perhaps intermittent use of the Tide was the cause of the fading, I wasnt smart enough to equate the detergent as a possible culprit. I am now washing darks on permanent press using the Seventh Generation, will see how they fair.They dont get very soiled because he wears undershits. Ive been sitting in front of the washer, watching the different cycles as they happen. Ah, I had to confess that Ive become obsessed with the laundry cycles. Everyone here will agree.; My cats and dog were there with me too.
